Welding can be dangerous. Any of these accidents might happen to you: you could be blinded by sparks; you could get an electric shock, your face, body, arms, legs or feet could be burnt; there could be a fire in the workshop. That's why it's absolutely necessary to wear protective clothing. A mask or helmet must be worn in electric arc welding. In gas welding goggles can be used. Clothes must be kept dry and clean. Thick, heavy boots must be worn. They must be made of some insulating material such as rubber. Gloves, apron and a cap must be worn. Overalls must have long sleeves and no pockets or cuffs. The floor in the workshop is made of concrete. There must be a metal container on the floor for the sparks.

3. Answer the questions:

1. Why is welding dangerous?
2. What is necessary to do to protect yourself?
3. Why must you keep clothes dry?
4. What material must boots be made of?
5. Why do you need a metal container on the floor?

Nowadays machine tools play an important role in the manufacture of almost all metal products. Machinists use them in making automobiles, radios, refrigerators, television sets and so on. Every mechanical workshop is equipped with machine tools. They are the main source for the manufacture of component parts of all machines and mechanical devices. There are about 500 kinds of machine tools. Some perform a single operation, such as drilling. Others, called machining centers, carry out several kinds of tasks.

3. Answer the questions:

1. Why are machine tools very important nowadays?
2. Where are they used?
3. How many kinds of machine tools are there?
4. What operations do they perform?
5. Why are machining centers called so?

These numerous machine tool types fall into two categories. The first group is called “metal-cutting”, the second – “metal-forming”. The machine tools of this group remove some material from the work piece and they are much stronger than the work piece itself. The examples of metal-cutting machines are lathes and drill presses.

Steel is known as an alloy of iron and about 2% or less carbon. Pure iron is soft, ductile and malleable, useful only as an ornamental material. However, the addition of carbon hardens it greatly and changes its properties. Steels for special applications may contain other alloying elements beside carbon. This modifies and improves the physical properties of the base steel. For example, small percentages of nickel, chromium, manganese and vanadium may be used for strengthening steels for construction work.

Heat treatment and mechanical working at cold or hot temperatures may also give steel alloys superior qualities, such as strength, hardness, toughness, wear resistance, corrosion resistance, electrical resistivity and workability.

3. *Answer the questions:*

1. What is steel?
2. How does the addition of carbon modify steel?
3. What may steel for special applications contain?
4. Where is it used?
5. What qualities may heat treatment and mechanical working give steel alloys?

The value of alloys was discovered in very ancient times. Brass and bronze were especially important. Today the most important are alloy steels, which have a lot of special characteristics. Steel is known as an alloy of iron and about 2% or less carbon. Steel making processes are known as melting, purifying and alloying at about 2900 F. Molten steel may be first cast into ingots. Later ingots are worked into finished products. This may be done by two major methods: hot-working and cold-working. The latter is generally used for making bars, wires, tubes, sheets and strips. Molten steel may also be cast directly into products.

32. *Answer the questions:*

1. What alloys were especially important in very ancient times?
2. What alloy is the most important today?
3. What is steel?
4. What are steel making processes?
5. What is molten steel used for?

Welding is one of the most important operations that are used in industry. Many parts of machines, automobiles, airplanes, ships, bridges and buildings are welded. In order to join two metal pieces it is necessary to soften them with heat and then to press, hammer or fuse them together. The most widely used method of welding is electric arc welding where the workpieces are joined by means of electricity at the temperature of about 7232 F. This is the hottest heat that can be obtained for engineering purposes.

3. *Answer the questions:*

1. What is one of the most important operations in industry?

My Place

I live in a flat. It is *neither big nor* small. It is on the fifth floor. Our flat has two rooms, a kitchen, a bathroom and a hall.

Our living room is big. It is light because it has a large window. To the left of the window there is a piano. To the right of the window there is an old wardrobe. In the middle of the room there is a big round table. We often gather together at this table and play table games. On the walls there are beautiful paintings of modern artists.

I have my own room. It is small. It hasn't got much furniture but it is very cosy. *It is a pity* that there is no balcony in my room.

Our kitchen is big and comfortable. We have a big fridge and a microwave oven. We usually have breakfast and supper in the kitchen.

I like my flat.

Food and Vitamins

People need vitamins to stay healthy. The word «vitamins» comes from the word «vita». «Vita» means life in Latin. People get vitamins from food they eat. There are a lot of vitamins in fruit and vegetables. Each vitamin is responsible for different things in human body. For example, vitamin A is necessary for eyes. Vitamin B is necessary for the nervous system. Vitamin C is important for bones and teeth.

To stay healthy you should eat healthy food. But unhealthy food is tasty because it has a lot of sugar or fat. Also it has no vitamins. For example, there is no vitamins in Coke, chips or fast food.

Scientists consider that the oldest tools that are known to the mankind are 2600000 years old. They were used by people in manual operations and that is why they were called hand tools. By the beginning of the Industrial Revolution, people had already made simple hand tools for cutting and shaping different materials. But in the 18th century there appeared machine tools that made mass production a reality in the 19th century. A machine tool is a power-driven machine that is used to perform different operations with metal or other material. Basic machine tools use mechanical power to bend, cut, and drill metal into desired shapes. More advanced machine tools use such power sources as electrical or chemical, heat, magnetism and ultrasound.

Задание 2.

Прочитайте текст об экстремальных видах спорта. Установите соответствие между вопросами А-Д и пронумерованными абзацами текста 1-3. Используйте каждую букву только один раз. В задании есть один лишний вопрос.

Extreme sports become increasingly popular because of punk culture and fashion.

Many sports demonstrate daring tricks and are connected with special culture.

Snowboarding was introduced into Olympics due to X Games.

A winter extreme sport requires a specially designed board.

Developed in the 1960s, snowboarding is believed to have originated in the US, where several inventors explored the idea of surfing on the snow. The sport quickly developed, and the early boards were replaced by designs that are specialized to meet the demands of different competitions. The basic design is a board to which the rider's feet are attached with bindings. The size and shape of a board varies according to its use and the size of the snowboarder.

The term extreme sports is generally attributed to the X Games, a made-for-television sports festival created by the cable network ESPN in 1995. The success of the X Games raised the profile of these sports. The extreme sports of mountain biking and snowboarding debuted at the Summer and Winter Olympic Games in 1996 and 1998, respectively.

The primary extreme sports - skateboarding, in-line roller-skating, and BMX, for example - often use half-pipes and urban landscapes to perform a wide range of tricks. The sports also share a unique subculture that separates them from traditional team sports. This youth-oriented culture embraces punk music and fashion and emphasizes individual creativity.

4.4. Критерии оценивания

Основой для определения уровня знаний, умений, навыков являются критерии оценивания – полнота и правильность: правильный, точный ответ; правильный, но неполный или неточный ответ; неправильный ответ; нет ответа.

При выставлении отметок необходимо учитывать классификации ошибок и их качество: грубые ошибки; однотипные ошибки; негрубые ошибки; недочеты.

Успешность освоения обучающимися тем дисциплины определяется качеством освоения знаний, умений и практических навыков, оценка выставляется по пятибалльной системе: «5» – отлично, «4» – хорошо, «3» – удовлетворительно, «2» – неудовлетворительно.

Критерии оценивания самостоятельной работы: уровень освоения студентом учебного материала; полнота и глубина общеучебных представлений, знаний и умений по изучаемой теме, к которой относится данная самостоятельная работа; сформированность общекультурных, общепрофессиональных и профессиональных компетенций (умение применять теоретические знания на практике.).

выполнен тематический конспект, правильно решены задачи и выполнены упражнения, даны точные ответы на тестовые задания (если имеются) – «зачтено».

не выполнен тематический конспект, не правильно решены задачи и выполнены упражнения, даны не точные ответы на тестовые задания (если имеются) – «не зачтено».

Критерии оценивания контрольной работы

«5» (отлично) – в работе присутствуют все структурные элементы, вопросы раскрыты полно, изложение материала логично, выводы аргументированы, использована актуальная литература, работа правильно оформлена.

«4» (хорошо) – в работе есть 2-3 незначительные ошибки, изложенный материал не противоречит выводам, в списке источников достаточное количество позиций, нет грубых ошибок в оформлении.

«3» (удовлетворительно) – один из вопросов раскрыт не полностью, присутствуют логические и фактические ошибки, плохо прослеживается связь между ответом и выводами, в списке литературы много устаревших источников, допущены существенные ошибки в оформлении.

«2» (неудовлетворительно) – количество ошибок превышает допустимую норму, в работе отсутствуют выводы или не хватает других структурных элементов, в списке литературы недостаточно источников, работа оформлена не по требованиям.

Критерии практической работы

«5» (отлично) – обучающийся показывает глубокие и полные знания учебного материала, при изложении не допускает неточностей и искажения фактов, излагает материал в логической последовательности, хорошо ориентируется в излагаемом материале, может дать обоснование высказываемым суждениям.

«4» (хорошо) – обучающийся освоил учебный материал в полном объёме, хорошо ориентируется в учебном материале, излагает материал в логической последовательности, однако при ответе допускает неточности.

«3» (удовлетворительно) – обучающийся освоил основные положения темы практического занятия, однако при изложении учебного материала допускает неточности, излагает его неполно и непоследовательно, для изложения нуждается в наводящих вопросах со стороны преподавателя, испытывает сложности с обоснованием высказанных суждений.

«2» (неудовлетворительно) – обучающийся имеет разрозненные и несистематизированные знания учебного материала, не умеет выделять главное и второстепенное, допускает ошибки в определении основных понятий, искажает их смысл, не может самостоятельно излагать материал.

Критерий оценивания тестирования в системе «Moodle»
